Subject: Rain Air Defense Systems, Inc. Approved Applicator Status

Dear Harry:

Rain Air Defense Systems, Inc. is approved to install BASF Corporation spray polyurethane foam (SPF) materials, supplied to them through distribution. Rain Air Defense Systems, Inc. has been installing BASF spray polyurethane foam for more than 10 years, having successfully completed a variety of projects using BASF closed cell SPF insulation systems and Roofing SPF in a variety of applications under diverse conditions.

BASF has been a manufacturer of the liquid components used to create SPF for over 35 years. BASF requires that contractors using our products follow industry guidelines for SPF applications published by Spray Polyurethane Foam Alliance (SPFA), and the Insulation Contractors Association of America (ICAA) and the Center for the Polyurethane Industry's website (www.spraypolyurethane.org) as well as any governmental requirements. BASF provides application and product information in our Technical Data Sheets and Safety Data Sheets amongst various other technical documents for the materials that we supply. Most of these documents can be found on our website at www.spf.basf.com.

Rain Air Defense Systems, Inc. has been trained on use of our products in accordance with industry and manufacturer's guidelines. The installation of spray polyurethane foam is done in the field by combining or spraying the liquid materials and producing a thermal insulation material. All building codes relating to applications and plastic foam materials are to be followed. Proper personal protective equipment (PPE) must be worn at all times during the application process by the applicator and all others exposed to the spray foam during application.

Please do not hesitate to call regarding questions you may have about the content in this letter. I can be reached at 800-706-0712, Option 2 or 281-740-6508 or spf.techsales@basf.com.

Respectfully,

A handwritten signature in blue ink that reads "Jermecia Garner".
